- Overlapping Toes • Over Pronation (Flat Feet) • Plantar Fasciitis • Post-tib Tendonitis
- Sports Injuries • Shin Splints • Verrucae

SERVICES INCLUDE

- Gait Analysis • FootScan • Orthoses

Ingrown Toenail

An ingrown toenail occurs when a piece of nail edge grows into the skin causing a painful inflamed toe. It usually affects the big toenails and may be caused by improper pedicure, injury or because of an excessive curvature of the nail. It is easily treated by painlessly removing the section of the nail causing the problem.
